## Open Access

An important aspect of Open Science is a move towards open access to research results funded with public money. Facilitating access to those results encourages the re-use of research output. Science and research have always been open, but some of the processes for producing research and disseminating its results are not.

It is now widely recognised that making research results more accessible to all societal actors contributes to better and more efficient science, and to innovation in the public and private sectors. In 2012, the European Commission published a **Recommendation on access to and preservation of scientific information** encouraging all EU Member States to put publicly-funded research results in the public domain in order to strengthen science and the knowledge-based economy.

This global shift towards giving free, online access (open access) to the results of publicly-funded research has been a core strategy of the European Commission to

» **Special feature: Open Access in Horizon 2020**

The European Commission has taken a big step towards open science in Europe. All projects receiving Horizon 2020 funding are required to make sure that any peer-reviewed journal article they publish is openly accessible, free of charge. The open access policy is summarized in a brief **factsheet**.

For the details of how open access applies to beneficiaries in projects funded under Horizon 2020, please see the **Guidelines on Open Access to Scientific Publications and Research Data** or the **Participant Portal H2020 online manual on open access and data management**

The Commission has been running a **pilot on open access** to research data in Horizon 2020: the Open Research Data (ORD) pilot. This pilot takes into account the need to balance openness with the protection of scientific information, commercialisation and Intellectual Property Rights (IPR), privacy concerns, and security, as well as questions of data management and preservation. Participating projects are required to develop a Data Management Plan (see the **Guidelines on Data Management**), in which they will specify what data will be open.

In previous work programmes, the ORD Pilot was limited to some specific areas of Horizon 2020. Starting with the 2017 work programme, however, the ORD pilot is being extended to cover **all thematic areas** of Horizon 2020.

For more information see the **FAQs** (187 KB) .

The screenshot shows a web browser window displaying the European Commission's Open Science page. The browser's address bar shows the URL `ec.europa.eu/research/openscience/index.cfm`. The page header includes navigation links such as "A-Z index", "Site map", "About this site", "What's New", "Legal notice", "Cookies", "Contact", and "Search". The main header features the European Commission logo and the text "RESEARCH & INNOVATION Open Science". Below this, a breadcrumb trail reads "European Commission > Research & Innovation > Open Science". A horizontal menu contains links for "Home", "Open Access", "European Open Science Cloud", "Open Science Policy Platform", and "Expert Group on Altmetrics". The main content area is titled "Open Science" and features a prominent headline: "11 October 2016 – first report from the High Level Expert Group". The text below the headline states: "The Commission has published today the first report of the Commission High Level Expert Group on the European Open Science Cloud (HLEG EOSC)." and "The Report recommends to close discussions about the 'perceived need' of a science cloud and to take immediate action on the EOSC in close concert with Member States". To the right of the main text, a box titled "A Vision for Europe" contains a bulleted list: "Open Innovation", "Open Science", and "Open to the World". The browser's status bar at the bottom shows navigation arrows and a scrollbar.

## Open Science

### 11 October 2016 – first report from the High Level Expert Group

The Commission has published today the first report of the Commission High Level Expert Group on the European Open Science Cloud (HLEG EOSC).

The Report recommends to close discussions about the 'perceived need' of a science cloud and to take immediate action on the EOSC in close concert with Member States

#### A Vision for Europe

- Open Innovation
- Open Science
- Open to the World

# Realising the European Open Science Cloud

First report and recommendations  
of the Commission High Level Expert Group  
on the European Open Science Cloud

# The European Open Science Cloud (EOSC)

**EOSC aims to accelerate and support the current transition to more effective Open Science and Open Innovation in the Digital Single Market.**

**It should enable trusted access to services, systems and the re-use of shared scientific data across disciplinary, social and geographical borders.**

# Challenges & Observations

**The majority of the challenges to reach a functional EOSC are social rather than technical.**

**The major technical challenge is the complexity of the data and analytics procedures across disciplines rather than the size of the data per se.**

# Challenges & Observations

**There is an alarming shortage of data experts both globally and in the European Union.**

**This is partly based on an archaic reward and funding system for science and innovation, sustaining the article culture and preventing effective data publishing and re-use.**

# Open Science?

**Mostly due to current methods capture and data malpractice, approximately 50% of all research data and experiments is considered not reproducible, and the vast majority (likely over 80%) of data never makes it to a trusted and sustainable repository.**

# The importance of sharing data

## The error that could subvert George Osborne's austerity programme

The theories on which the chancellor based his cuts policies have been shown to be based on an embarrassing mistake

Charles Arthur and Phillip Inman

The Guardian, Thursday 18 April 2013 21.10 BST

George Osborne says that Ken Rogoff, the man whose economic error has been uncovered, has strongly influenced his thinking. Photograph: Stefan Wermuth/PA

A mistake in a spreadsheet led to dramatically different results from those published.

These results were cited by the International Monetary Fund and the UK Treasury to justify austerity programmes.

Had the data been shared, this could have been picked up earlier.

# Open Science

**Scholarly communication, which has been dominated by narrative and verbal means of delivery for centuries, should be moving rapidly towards communication and re-use formats that also better suit our main research assistants: the data generating machines and data processing machines.**

# Open Science

**Cross-disciplinary collaboration is critically needed, as scientists increasingly use raw and curated data resources and analytics tools from disciplines other than their own.**

# Open Science

**Frame the EOSC as the EU contribution to an Internet of FAIR Data and Services underpinned with open protocols.**

**Make adequate data stewardship mandatory for all research proposals.**

# OPEN RESEARCH DATA IN HORIZON 2020

**Jean-François Dechamp  
& Daniel Spichtinger**

European Commission  
Directorate-General for Research & Innovation

# CHALLENGE

---

Wider access to scientific facts and knowledge helps researchers, innovators and the public find and re-use data, and check research results:

offers better value  
for EU research funds

a public benefit

encourages research  
across scientific fields

essential for solving  
today's complex  
societal challenges

# SOLUTION

---

Horizon 2020 already mandates open access to all scientific publications

From 2017,  
research data is **open by default**,  
with possibilities to opt out

# RESEARCH DATA – OPEN BY DEFAULT

# FAIR data

- **Findable**
  - *assign persistent IDs, provide rich metadata, register in a searchable resource...*
- **Accessible**
  - *Retrievable by their ID using a standard protocol, metadata remain accessible even if data aren't...*
- **Interoperable**
  - *Use formal, broadly applicable languages, use standard vocabularies, qualified references...*
- **Reusable**
  - *Rich, accurate metadata, clear licences, provenance, use of community standards...*

# RESEARCH DATA – OPEN BY DEFAULT

Horizon 2020 grantees are required

take measures to ensure open access to the **data underlying their scientific publications**

provide open access to **any other research data of their choice**

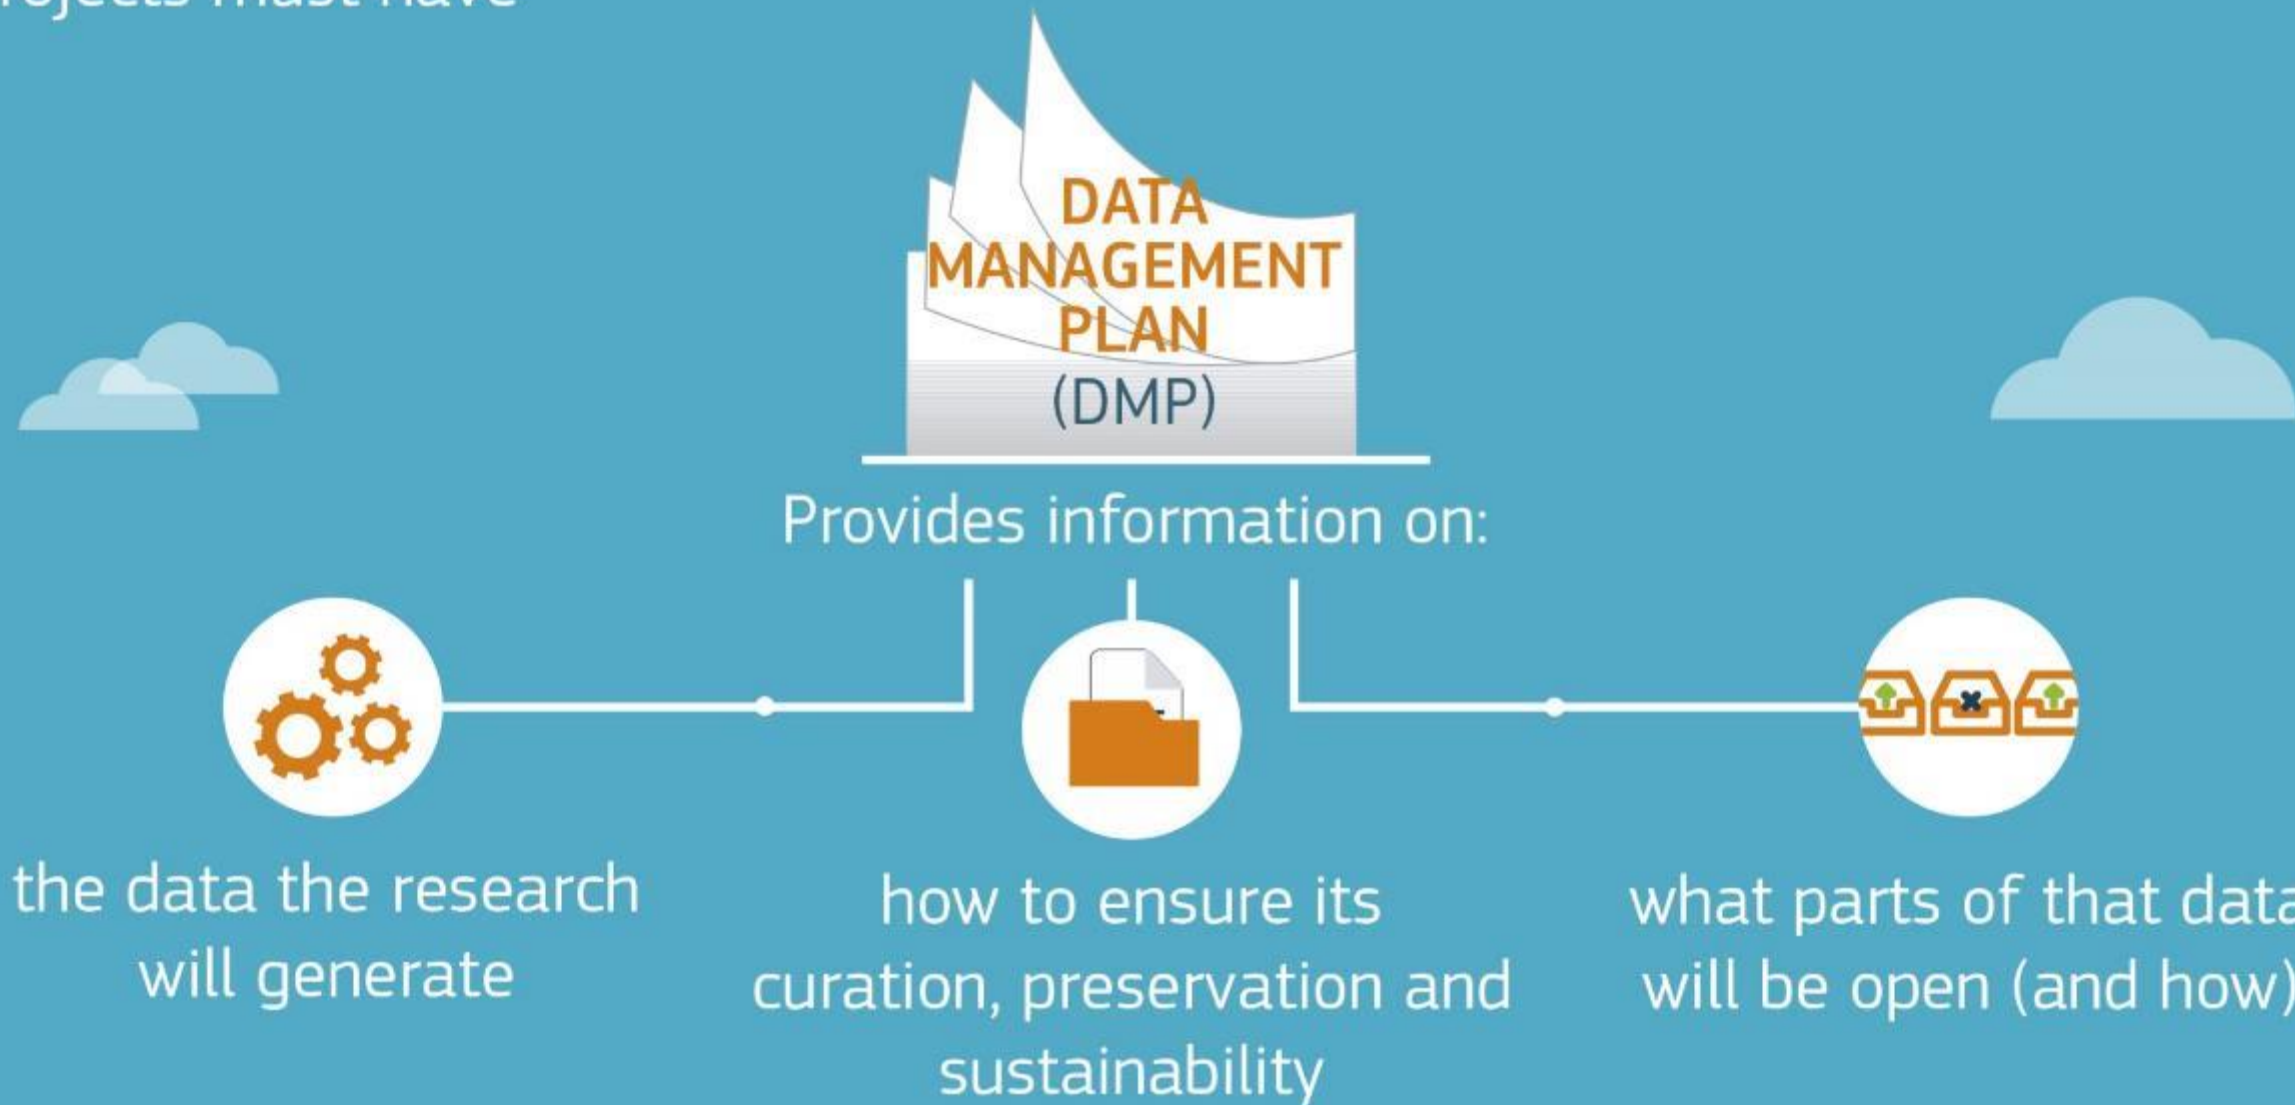

Horizon 2020 grantees are **encouraged to also share datasets beyond publication**

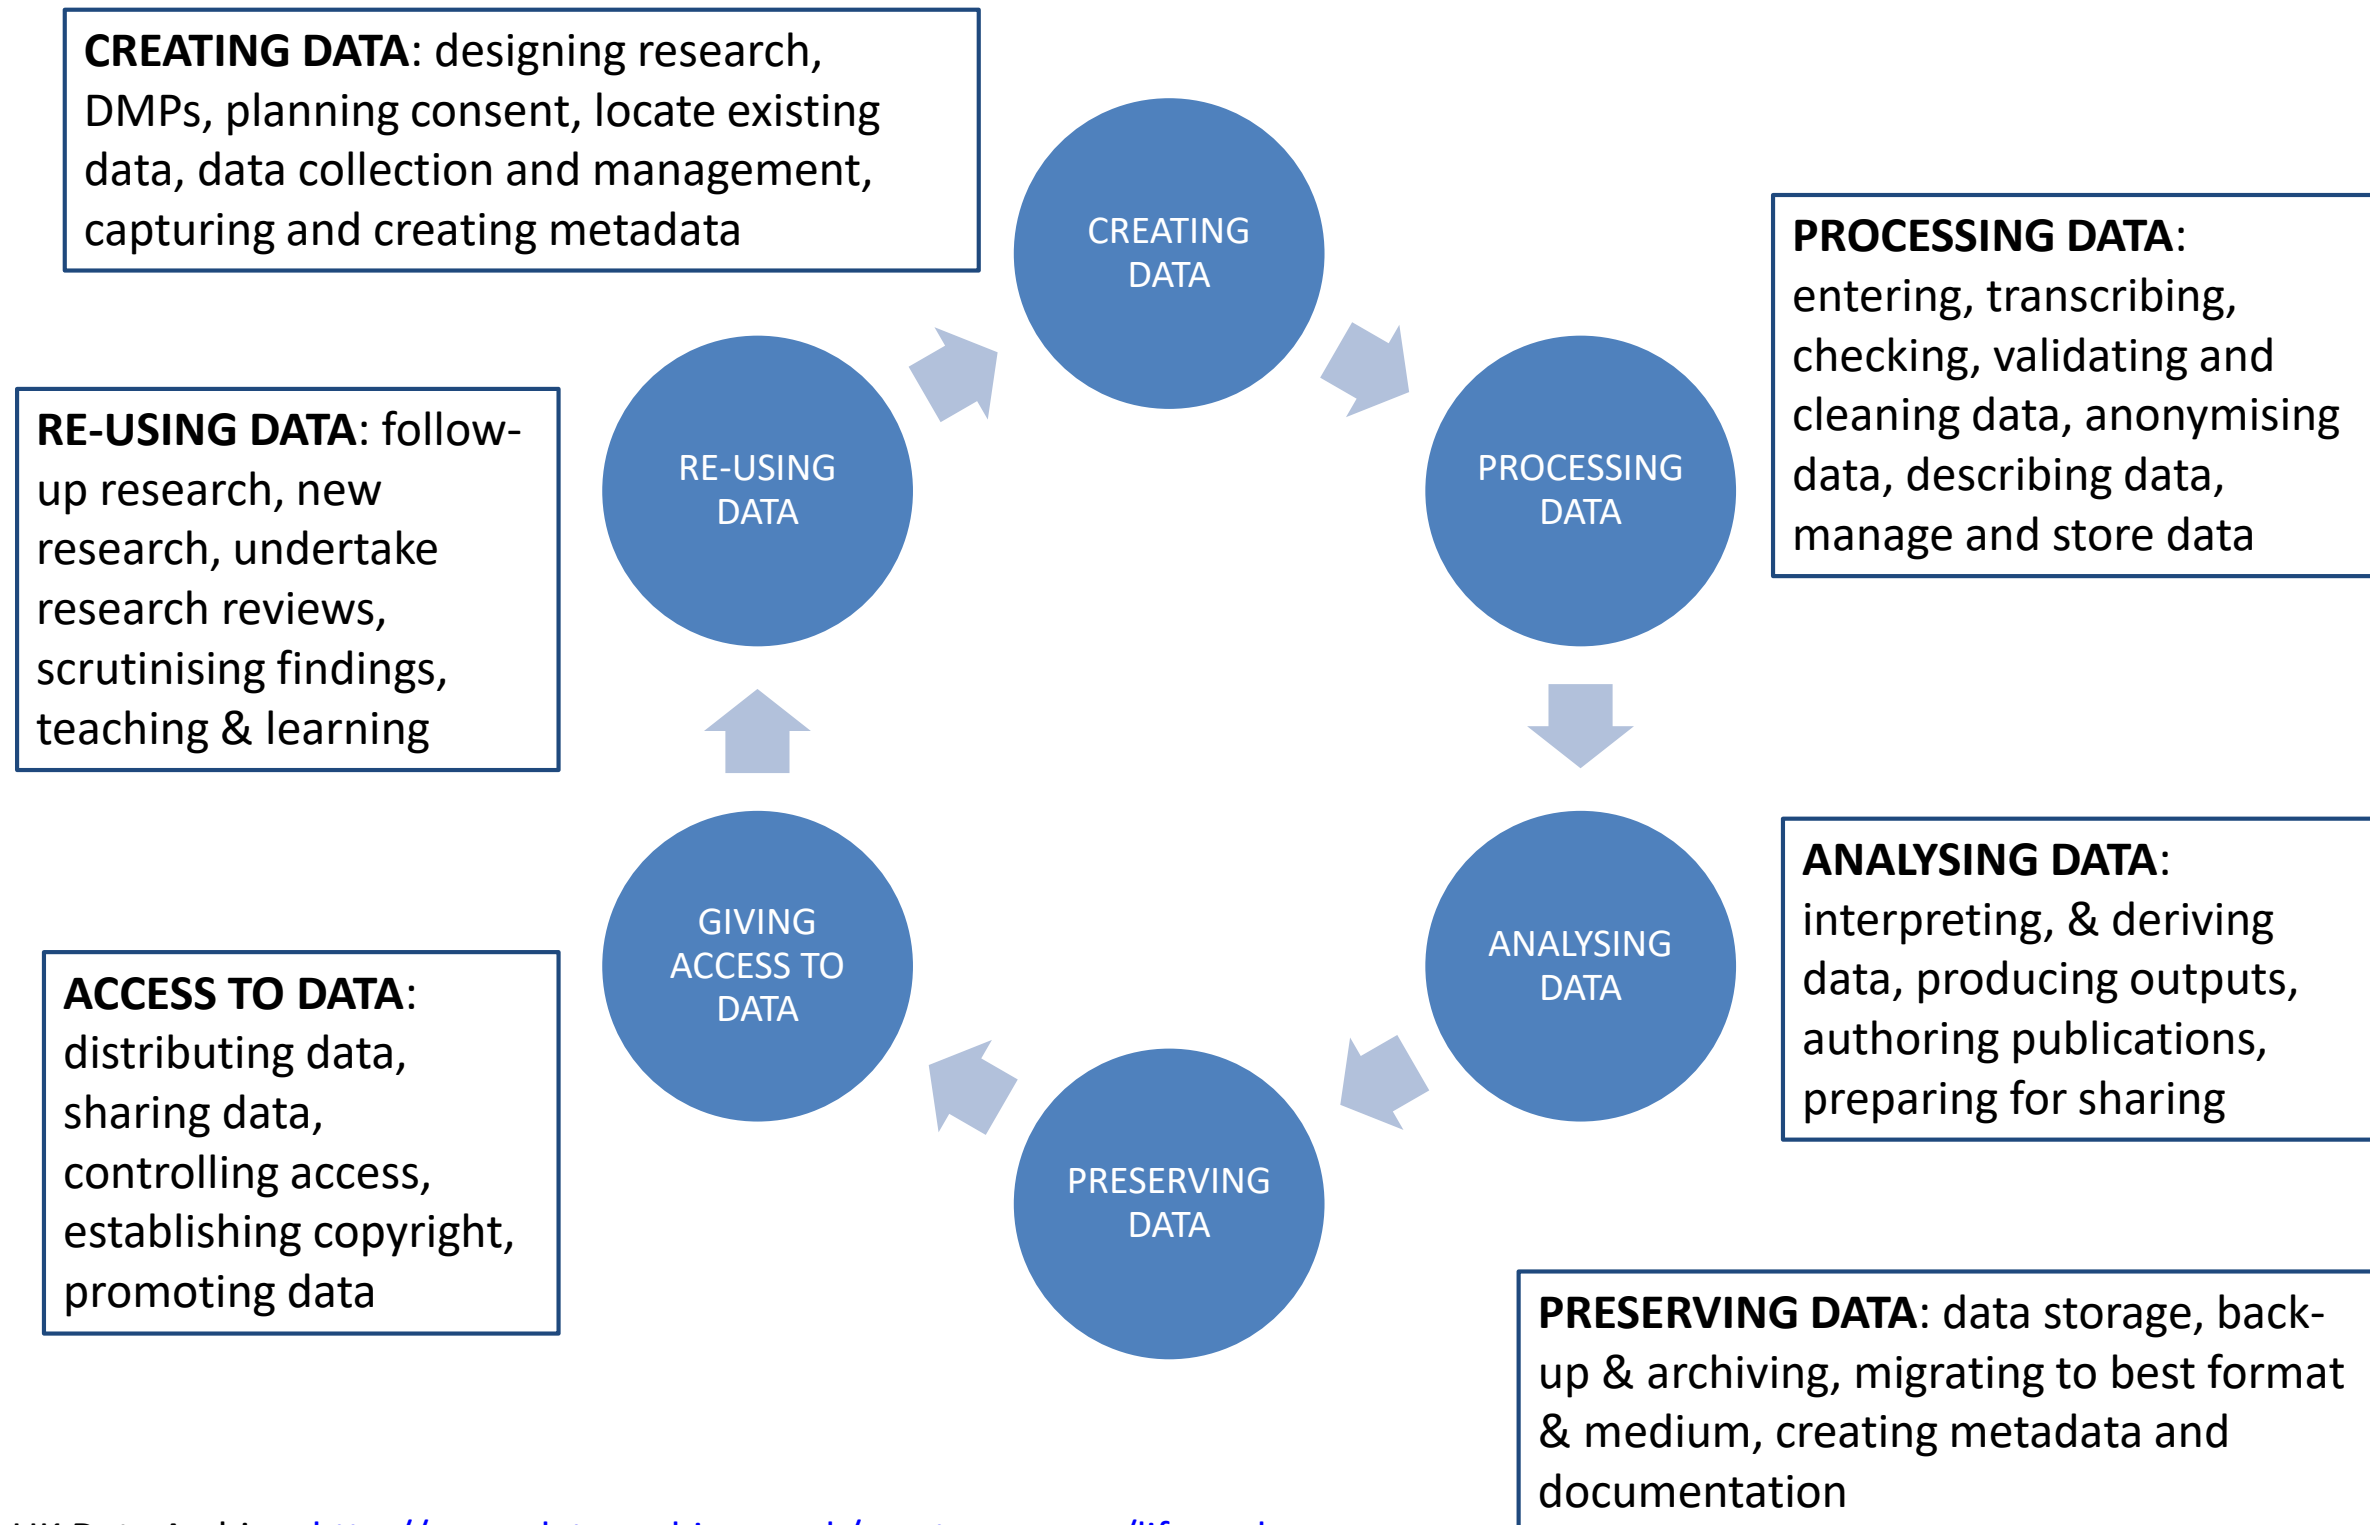

# RESEARCH DATA – OPEN BY DEFAULT

Projects must have

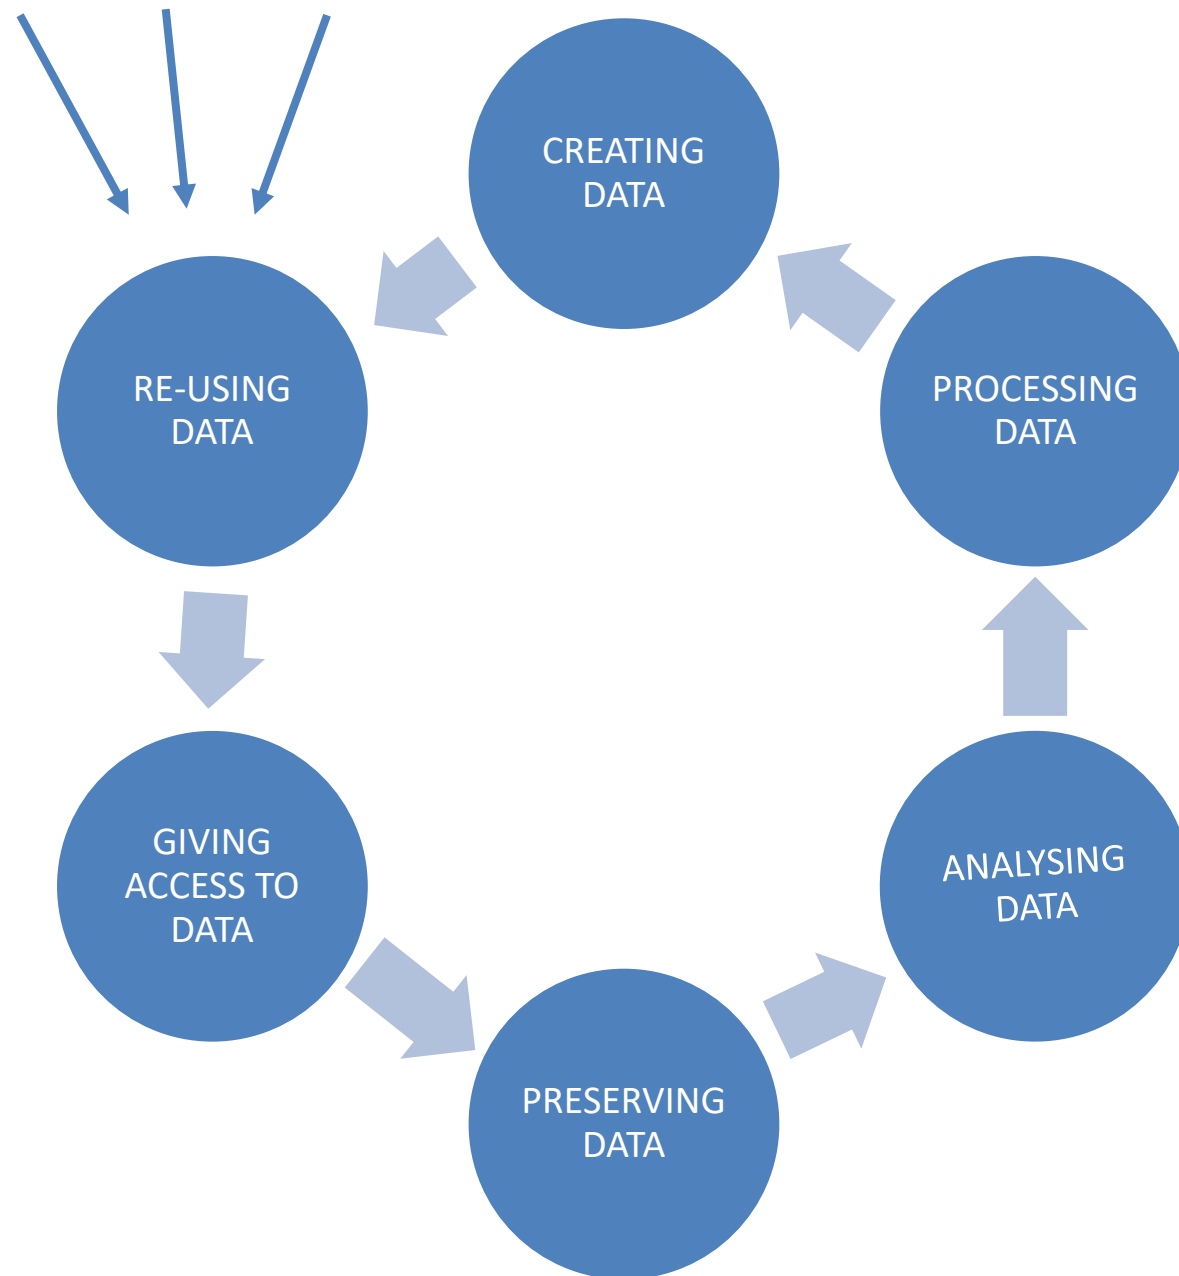

# Research data lifecycle

# Planning trick 1: think backwards

What data organisation would a re-user like?

A web-based tool to help researchers write DMPs

Includes a template for Horizon 2020

Guidance from EUDAT and OpenAIRE being added

My plan (Horizon 2020 DMP) No questions have been answered

Plan details Initial DMP Mid-term Review DMP Final review DMP Share Export

For each data set specify the following: (5 questions, 0 answered)

Data set reference and name

Save

Not answered yet

Data set description

**B** *I*    

EC Guidance

Identifier for the data set to be produced.

EC Guidance

Description of the data that will be generated or collected, its origin (in case it is collected), nature and scale and to whom it could be useful, and whether it underpins a scientific publication. Information on the existence (or not) of similar data and the possibilities for integration and reuse.

Technical plan

Naming convention: [PI Surname] TechP

Before reading this section, please see the **Case for Support Guidance** regarding a Technical Summary.

A Technical Plan should be no more than four pages long and provided for all applications where digital outputs or digital technologies are an essential part to the planned research outcomes. A digital output or digital technology is defined as an activity which involves the creation, gathering, collecting and/or processing of digital information. For present purposes digital technologies do not include conventional software such as word processing packages and ICT activities such as email.

Please read this guidance carefully and consider its definitions within the context of your own research proposal.

The purpose of the Technical Plan is to demonstrate to the AHRC that technical provisions within a research proposal have been adequately addressed in terms of:

(a) Delivering the planned digital output or the digital technology from a practical and

Naming convention: [PI Surname] TechP

Before reading this section, please see the **Case for Support Guidance** regarding a Technical Summary.

A Technical Plan should be no more than four pages long and provided for all applications where digital outputs or digital technologies are an essential part to the planned research outcomes. A digital output or digital technology is defined as an activity which involves the creation, gathering, collecting and/or processing of digital information. For present purposes digital technologies do not include conventional software such as word processing packages and ICT activities such as email.

Please read this guidance carefully and consider its definitions within the context of your own research proposal.

The purpose of the Technical Plan is to

# Common themes in DMPs

1. Description of data to be collected / created  
(i.e. content, type, format, volume...)
2. Standards / methodologies for data collection & management
3. Ethics and Intellectual Property  
(highlight restrictions on data sharing e.g. embargoes, confidentiality)
4. Plans for data sharing and access  
(i.e. how, when, to whom)
5. Strategy for long-term preservation

**Start planning and communicating early**

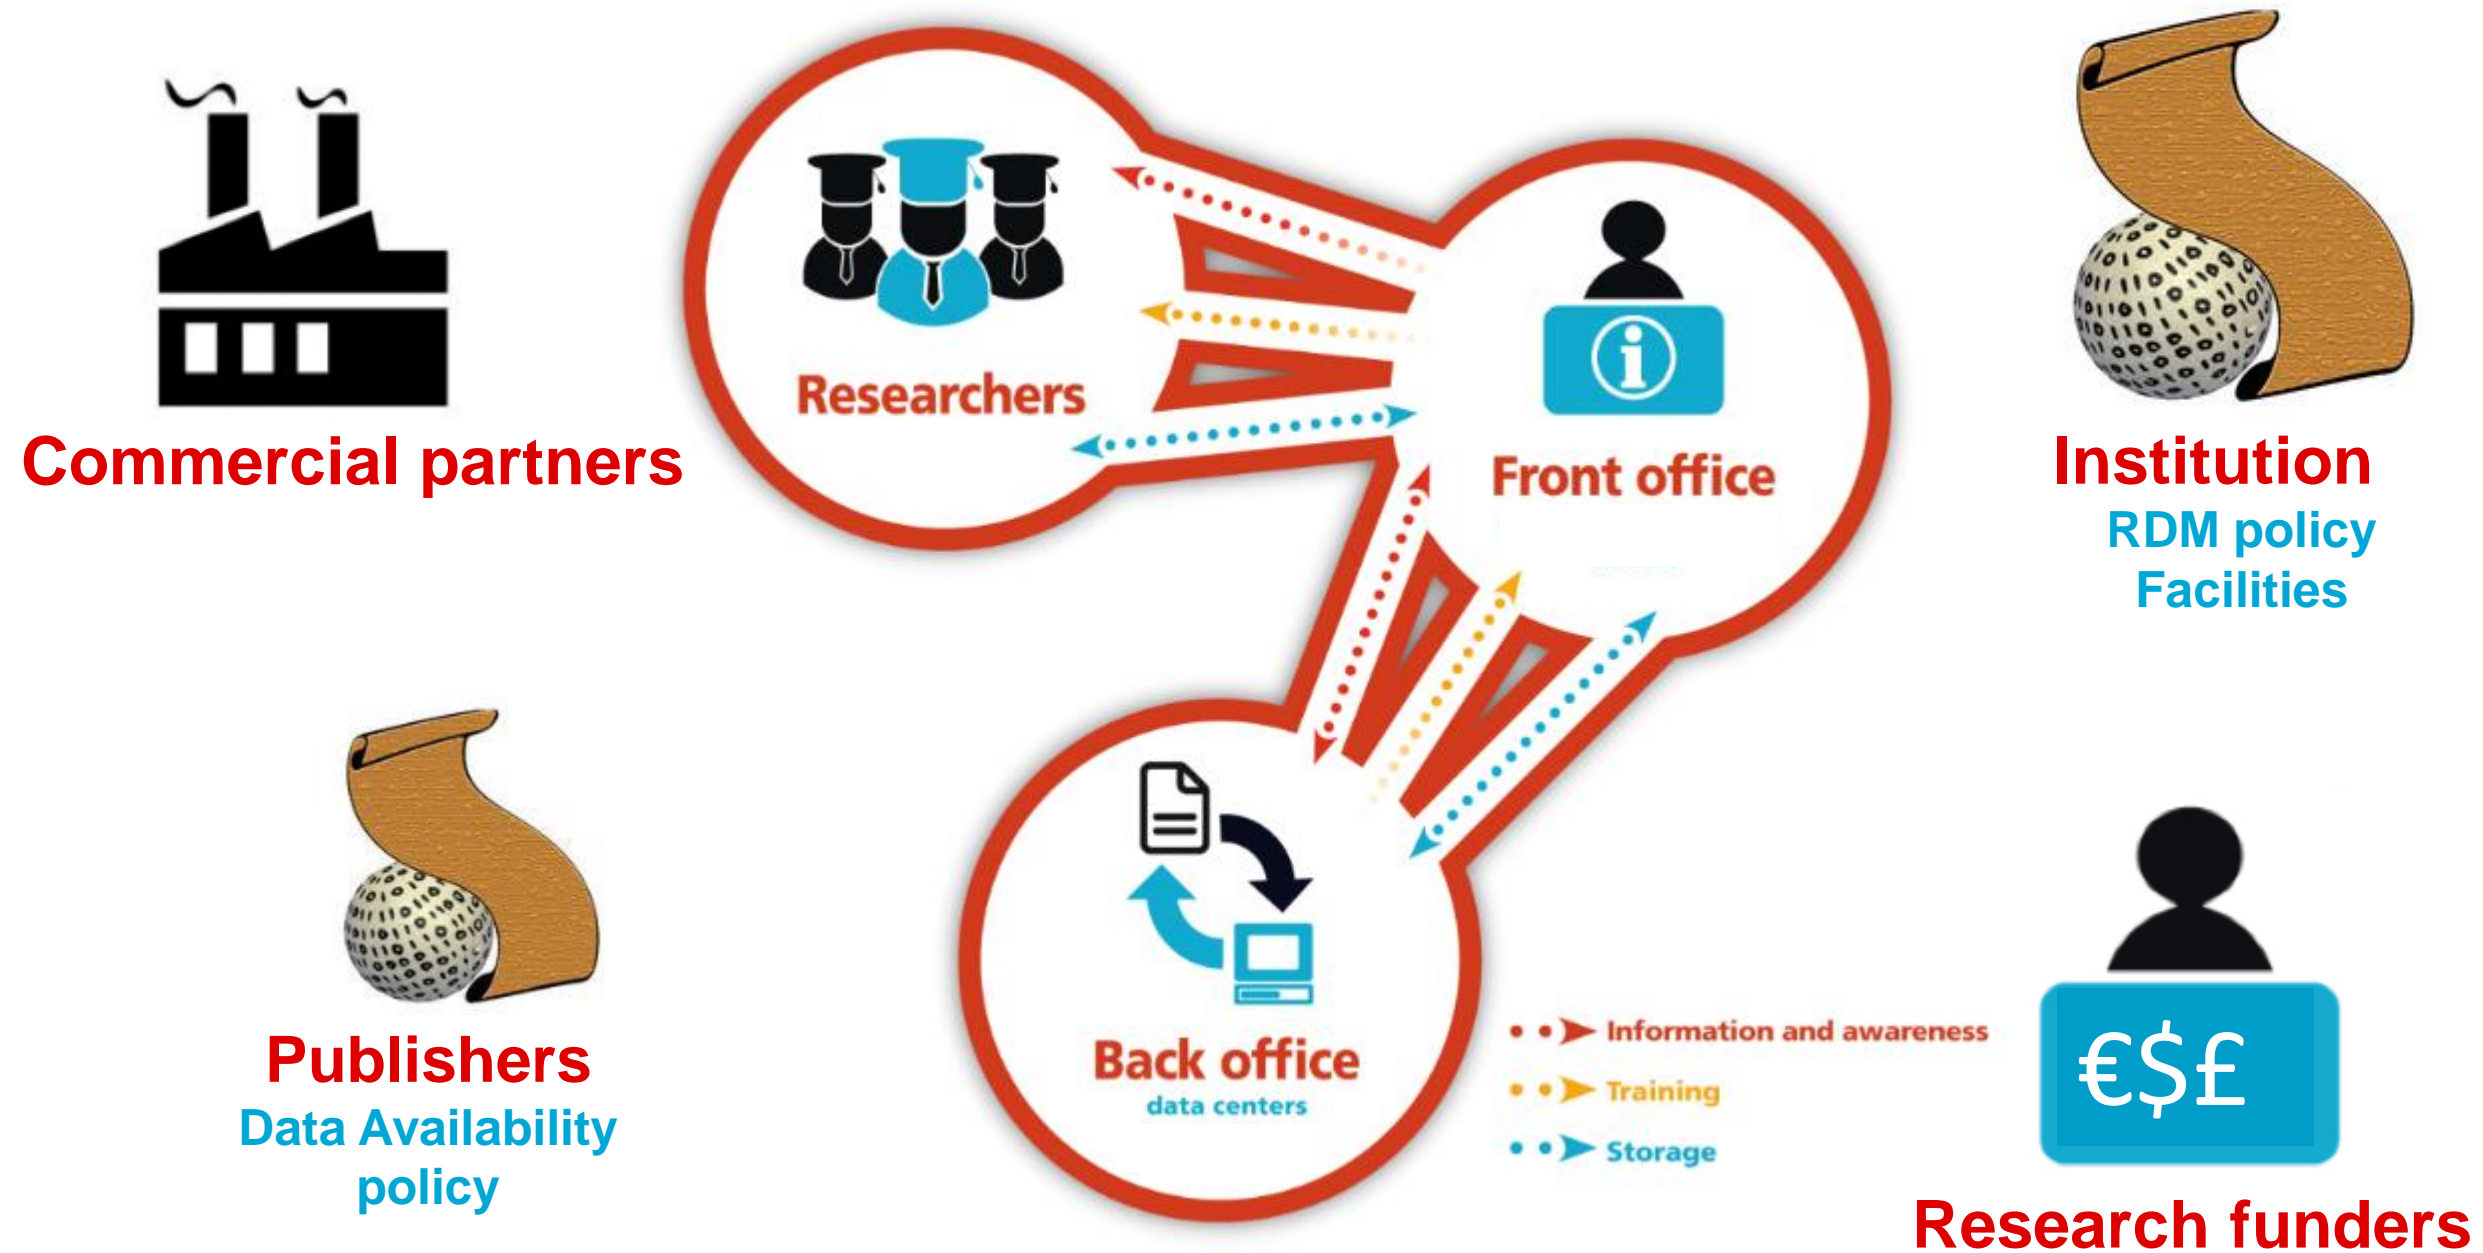

# Why manage data?

**NON PECUNIAE INVESTIGATIONIS CURATORE  
SED VITAE FACIMUS PROGRAMMAS DATORUM PROCURATIONIS**

(Not for the research funder, but for life we make data management plans)

- Make your research easier
- Stop yourself drowning in irrelevant stuff
- Save data for later
- Avoid accusations of fraud or bad science
- Write a data paper
- Share your data for re-use
- Get credit for it

## Planning trick 2: include RDM stakeholders

# Responsibilities in RDM

- ☐ **The principal investigator** – ultimately responsible for the data and for data management
- ☐ **Researchers, research assistants and/or data managers** – involved in day-to-day data management
- ☐ **The institution's management** – draft and enforce data policies; raise data awareness
- ☐ **The institution's research office consisting of library, IT and legal services** – provide external data, tools, secure storage and access; expertise on rights management and ethics, data citation, metadata, access and licenses, funder requirements; raise data awareness
- ☐ **Research funders** – encourage good data practices; invest in data infrastructure; raise data awareness
- ☐ **Project partners** in academic and other research institutions as well as commercial partners
- ☐ **Academic publishers** – impose requirements on the availability of data underlying submitted and/or published papers; provide identifiers to cite papers and link to related data
- ☐ **Research data repositories** – preserve data long term; provide persistent identifiers and data discovery service

# Example plans

GRANT NEWS

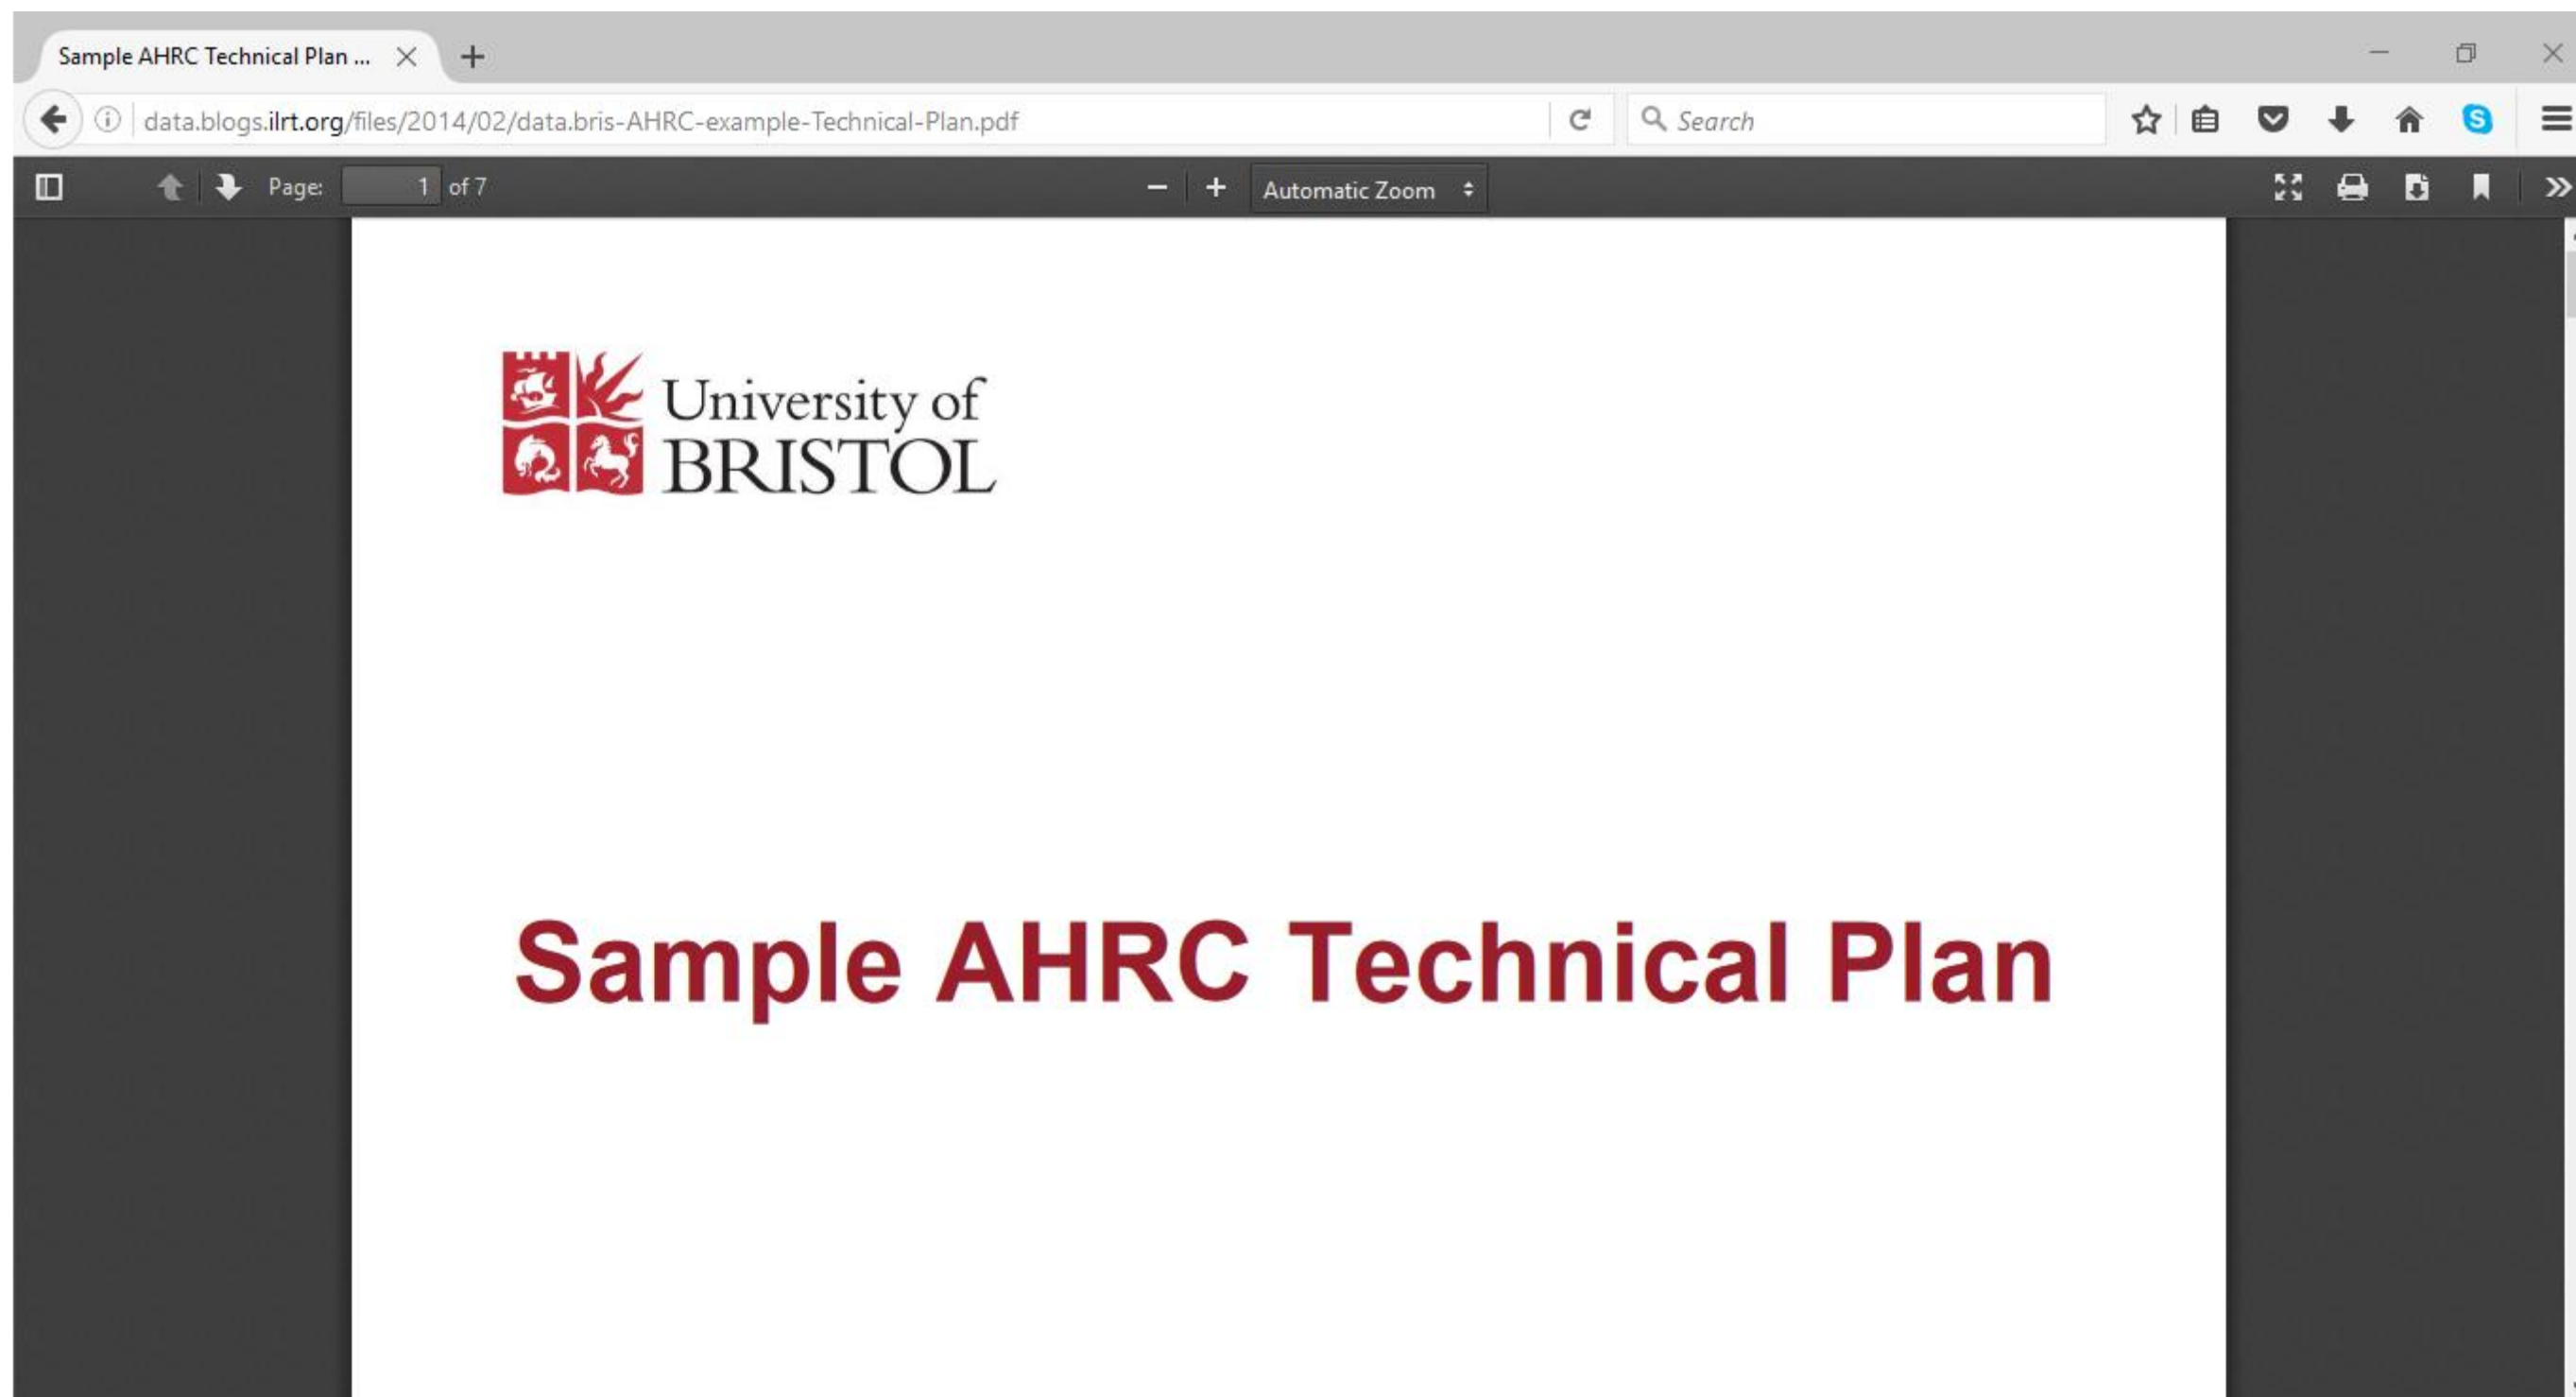

### Data Management Plans From Successful Grant Applications (2011-2014) Now Available

NOVEMBER 4, 2015 | BY JASON RHODY

Like Share 0 Tweet G+1 0

EMAIL PRINT

Beginning in 2011, the NEH Office of Digital Humanities (ODH) began requiring a Data Management Plan (DMP) for the majority of its grant programs. In the past year, NEH has received a number of Freedom of Information Act (FOIA) requests to view some or all of the DMPs submitted as a component of successful grant applications since 2011. Due to the high level of interest from scholars and the general public in the DMPs submitted, NEH has bundled the plans in a zip file and is making them available for download via the NEH FOIA Library [the link entitled "Data Management Plans From Successful Grant Applications (2011 - 2014)" leads to a 15.1mb zip file]: <http://www.neh.gov/about/foia/library>

[http://library.leeds.ac.uk/info/377/roadmap/123/roadmap\\_events/2](http://library.leeds.ac.uk/info/377/roadmap/123/roadmap_events/2)

**[Annex B - Data Management Plan B]**

## ESRC-DFID Example Data Management Plan

[http://www.esrc.ac.uk/images/Example-Data-Management-Plan\\_tcm8-20657.pdf](http://www.esrc.ac.uk/images/Example-Data-Management-Plan_tcm8-20657.pdf)

### Existing data

The research objectives require qualitative data that are not available from other sources. Some data exist that can be used to situate and triangulate the findings of the proposed research (eg, surveys of poverty impacts; opinion polls), and which will supplement data collected as part of the proposed research. However, qualitative and attitudinal data are generally rare or of insufficiently high quality to address the research questions.

The research objectives also require quantitative analysis of public data. Some quantitative data are available, but they are insufficiently detailed. In their current form, they would not permit as full a comparison across the cases as is desirable.

# RESEARCH DATA – OPEN BY DEFAULT

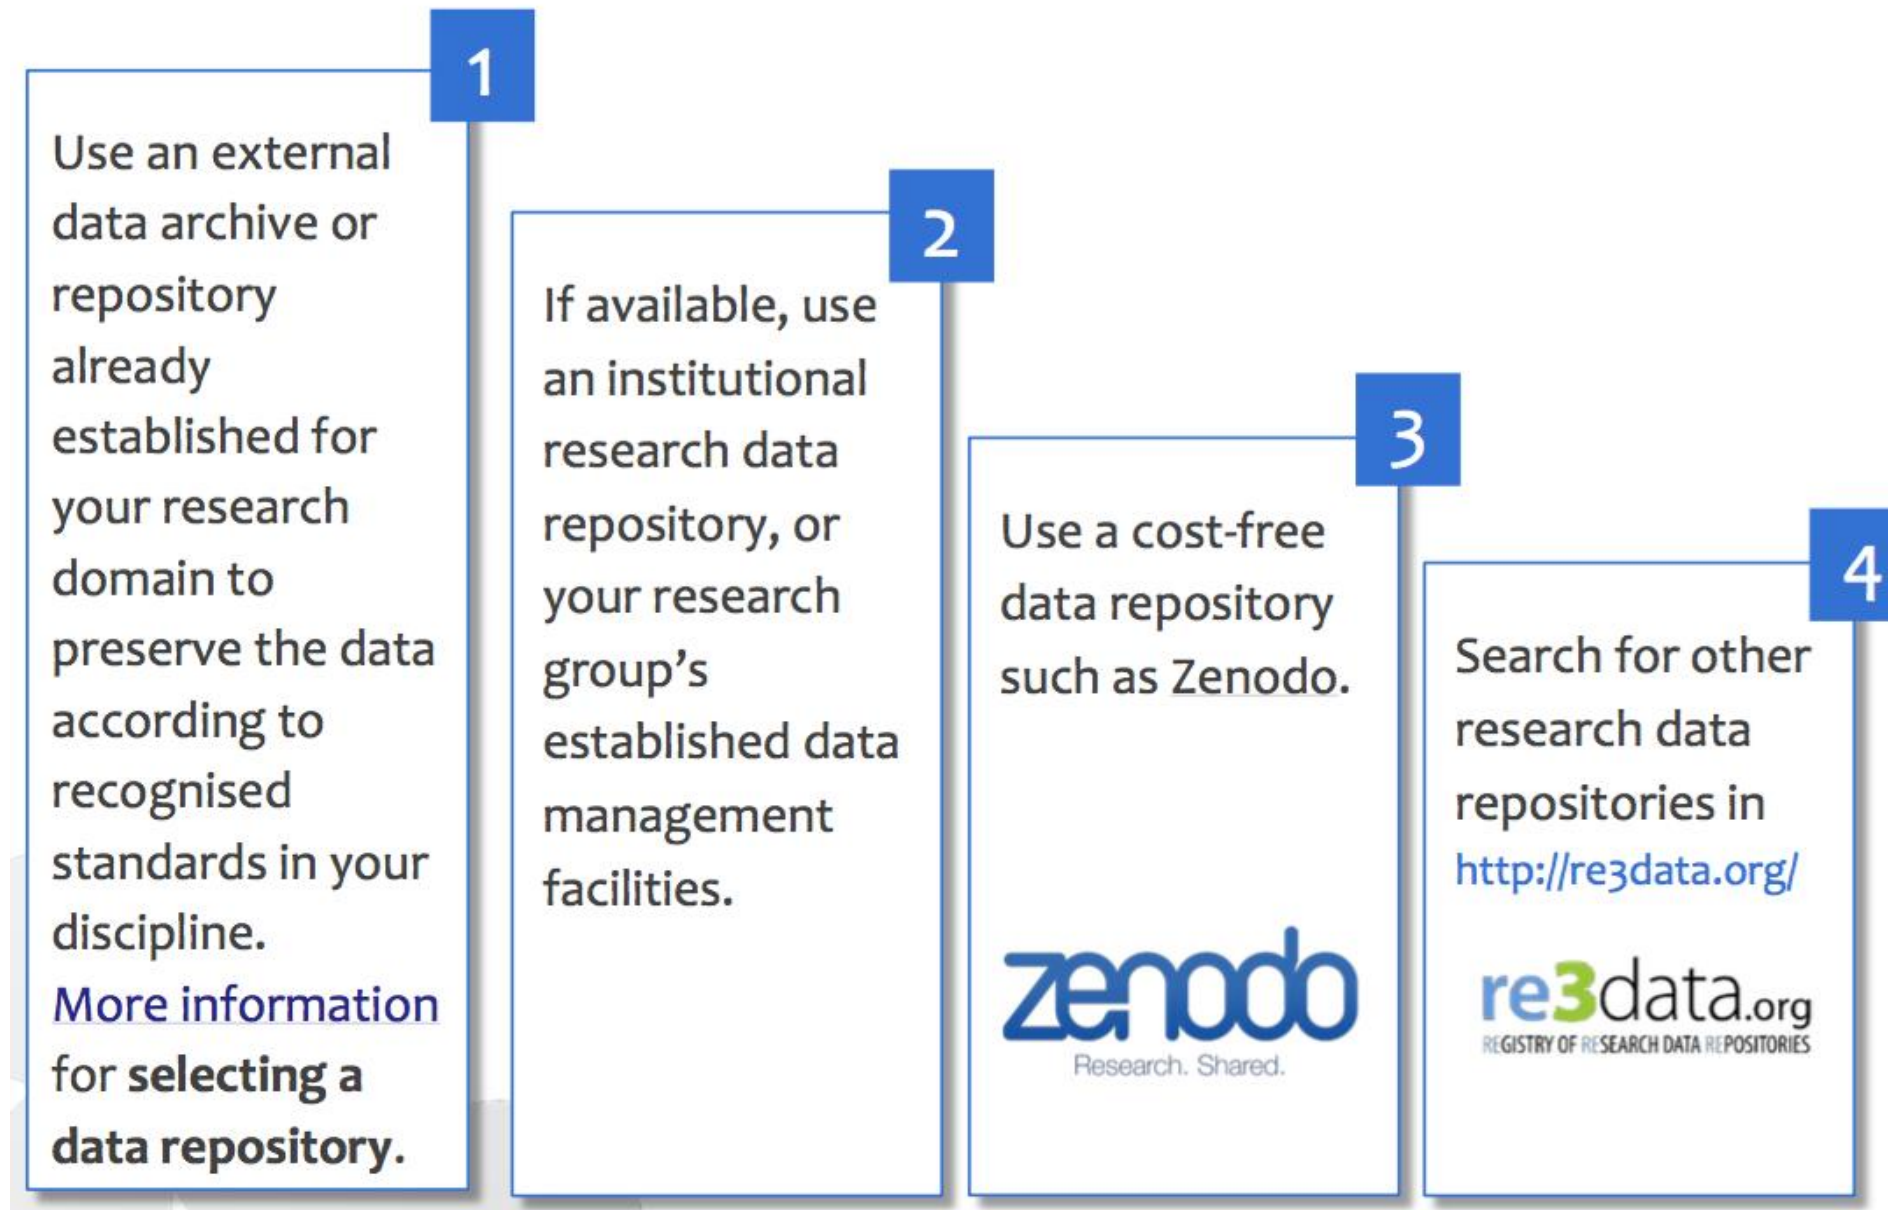

Data management costs are fully eligible for funding

No repository imposed:  
deposit data where you want

# Where to find a repository?

- More information: <https://www.openaire.eu/opendatapilot-repository>
- Zenodo: <http://www.zenodo.org>

# Zenodo (OpenAIRE/CERN repository)

(All) Research.  
Shared.

— your one stop research shop!

All research outputs from across all fields of science are welcome! Zenodo accept any file format as well as both positive and negative results. However, we do promote peer-reviewed openly accessible research, and we curate your upload before putting it on the front-

Citeable.  
Discoverable.

— be found!

Zenodo assigns all publicly available uploads a Digital

Community  
Collections

— create your own repository

Zenodo allows you to create your own collection and accept or reject all uploads to it. Creating a space for your next workshop or project have never been easier. Plus, everything is citeable and discoverable.

Safe

— more than just a drop box!

Your research output is stored safely for the future in same cloud infrastructure as research data from CERN's [Large Hadron Collider](#) using a CERN's battle-tested repository software [INVENIO](#) used by some of the world's largest repositories such as [INSPIRE HEP](#) and [CERN Document Server](#).

Reporting

— tell your funding agency!

Zenodo is integrated into reporting lines for research funded by the European Commission via [OpenAIRE](#). Just upload your research on Zenodo and we will take care of the reporting for you. We plan to extend with further funding agencies in the future so stay tuned!

Flexible  
Licensing

— not everything is under Creative Commons

Zenodo encourage you to share your research as openly as possible to maximize use and re-use of your research results. However, we also acknowledge that one size does not fit all, and therefore allow for uploading under a multitude of different licenses and access levels\*.

\* You are responsible for respecting applicable copyright and license conditions for the files you upload.

# AS OPEN AS POSSIBLE, AS CLOSED AS NECESSARY

---

Grantees have the right to **opt-out**, but need to say **why**

# AS OPEN AS POSSIBLE, AS CLOSED AS NECESSARY

Top three reasons for **opt-out**:

# AS OPEN AS POSSIBLE, AS CLOSED AS NECESSARY

The approach has been tested during a Horizon 2020 pilot action

# BE PART OF THE NEW ERA OF OPEN SCIENCE

reach more  
people,  
have greater  
impact

avoid  
duplication  
of efforts

preserve data  
for future  
researchers

simplify final  
Horizon 2020  
reporting  
thanks to an  
up-to-date DMP

# BE PART OF THE NEW ERA OF OPEN SCIENCE

here's one example of the gains  
arising from open research data

## Bioinformatics Institute

**€1.3 billion** per year

Benefits identified by the European Bioinformatics Institute to users and their funders just by making scientific information freely available to the global life science community...

equivalent to **more than 20 times** the direct operational cost of the Institute

Source: Charles Beagrie Ltd. for EMBL-EBI

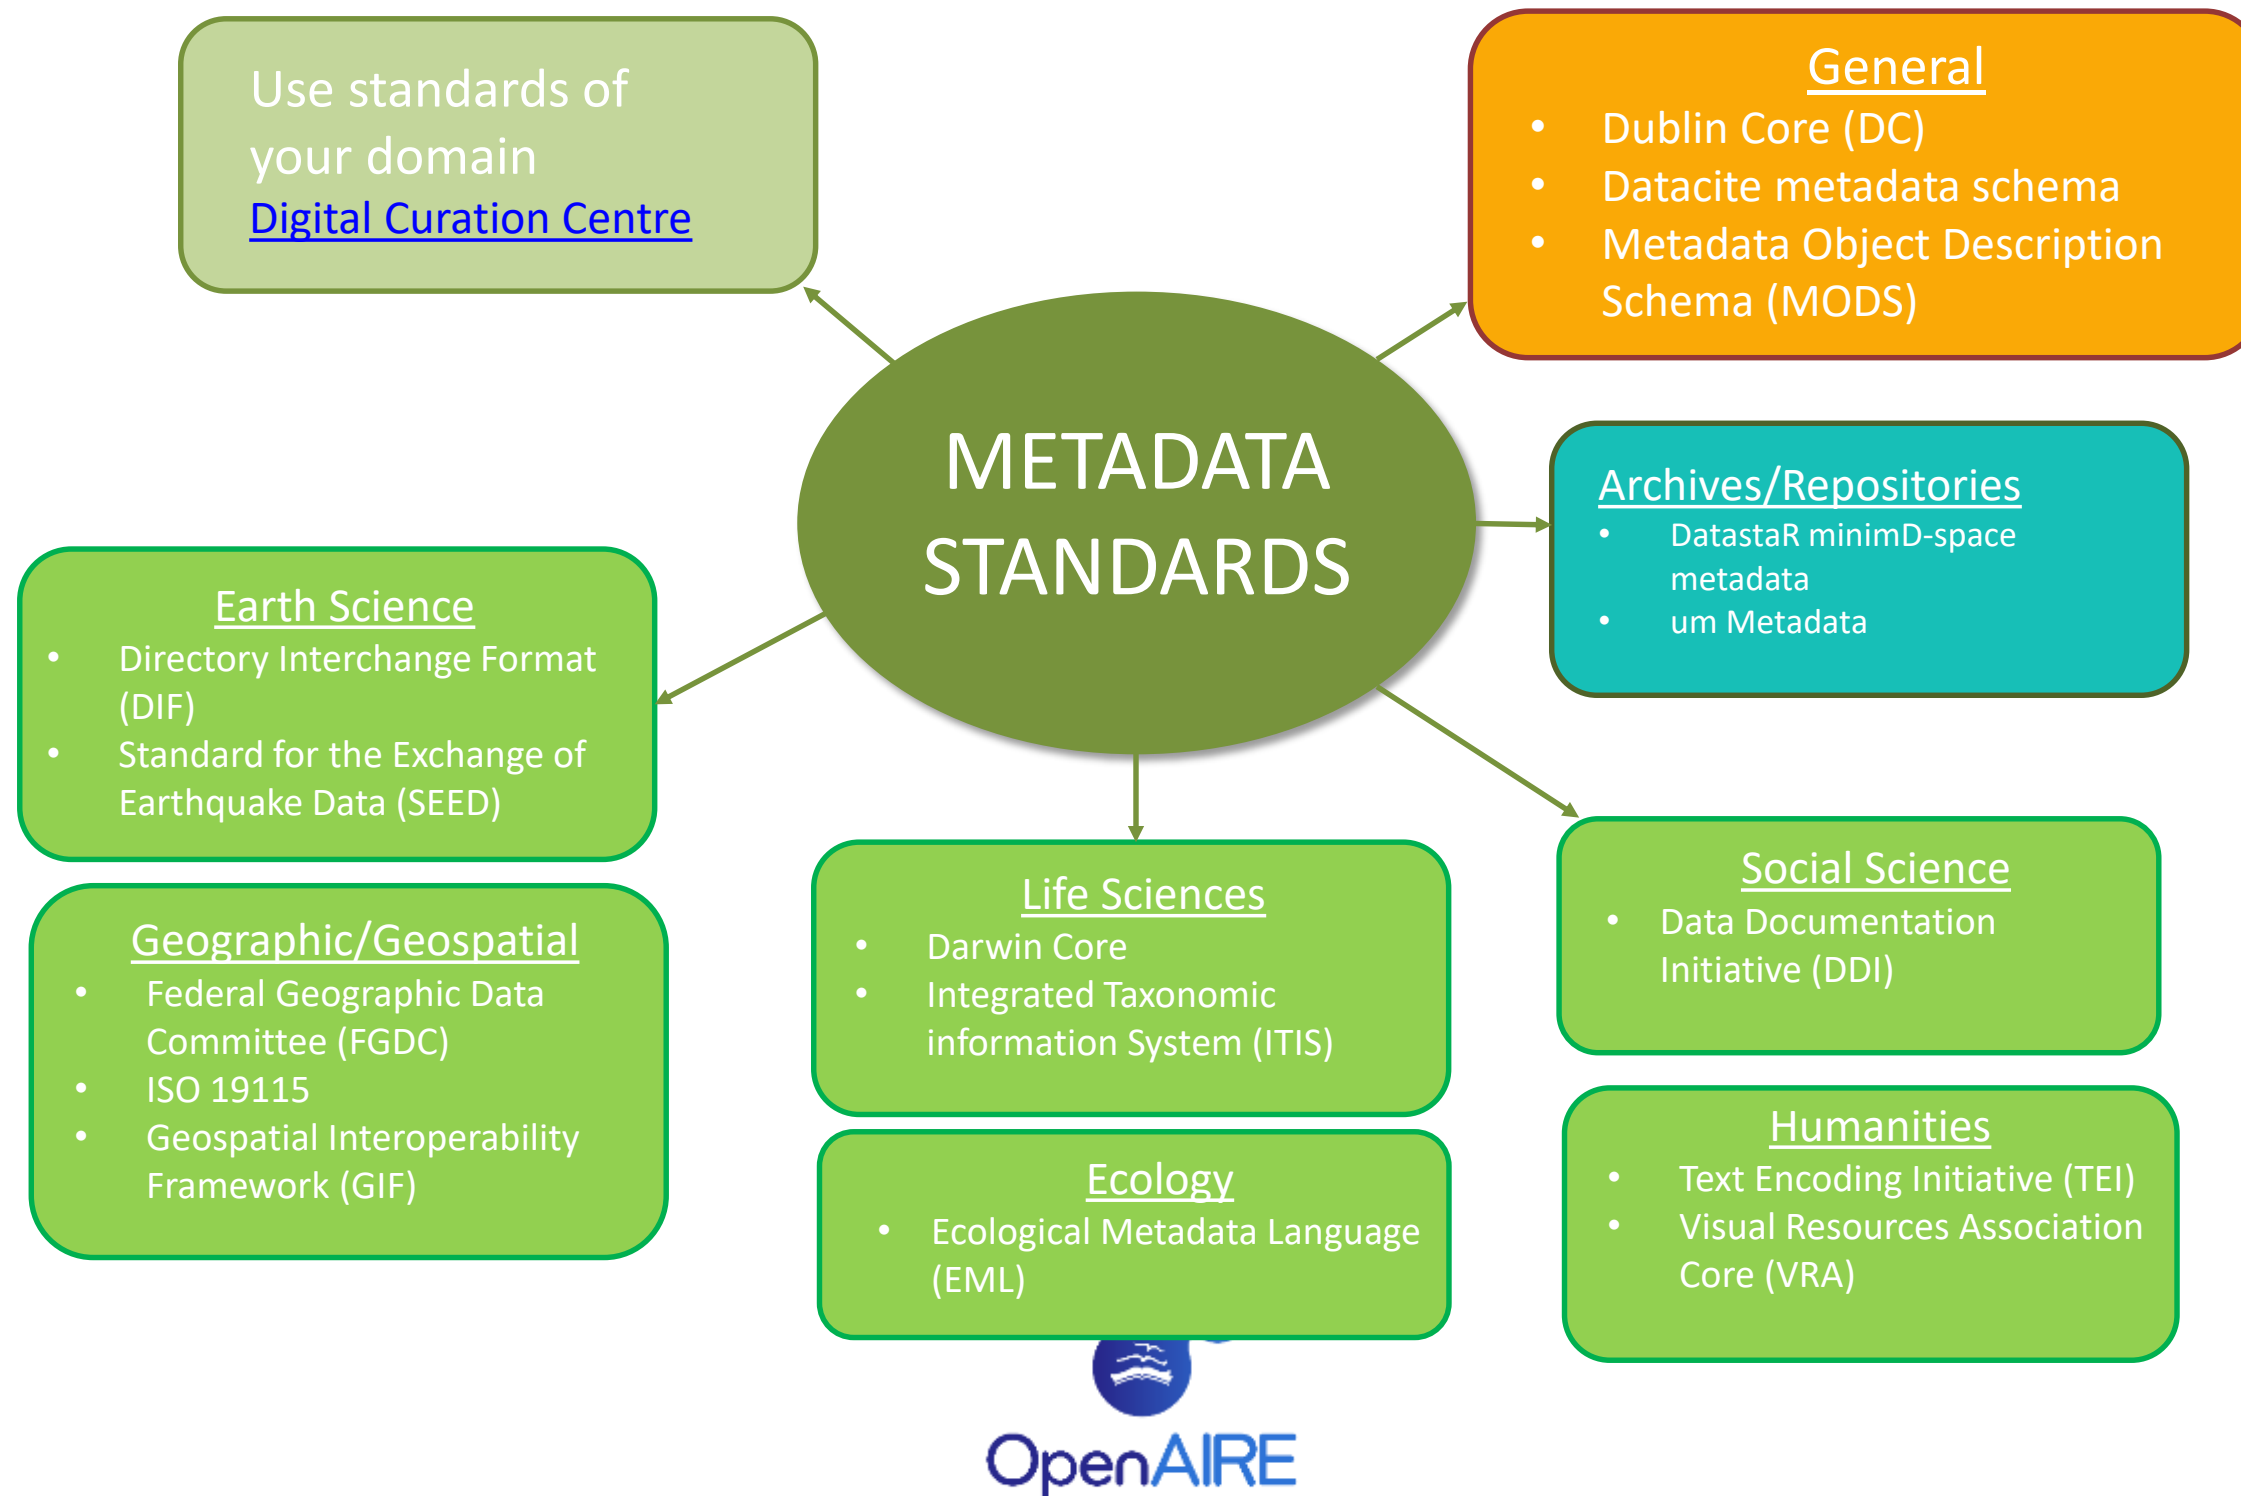

# Concerns about data sharing

Concern	Solution
inappropriate use due to misunderstanding of research purpose or parameters	
security and confidentiality of sensitive data	
lack of acknowledgement / credit	
loss of advantage when competing for research funding	

# Concerns about data sharing

Concern	Solution
inappropriate use due to misunderstanding of research purpose or parameters	 metadata
security and confidentiality of sensitive data	 metadata
lack of acknowledgement / credit	 metadata
loss of advantage when competing for research funding	 metadata

# Concerns about data sharing

Concern	Solution
inappropriate use due to misunderstanding of research purpose or parameters	provide rich <i>Abstract</i> , <i>Purpose</i> , <i>Use Constraints</i> and <i>Supplemental Information</i> where needed
security and confidentiality of sensitive data	<ul style="list-style-type: none"><li>the metadata does NOT contain the data</li><li><i>Use Constraints</i> specify who may access the data and how</li></ul>
lack of acknowledgement / credit	specify a <b>required</b> data citation within the <i>Use Constraints</i>
loss of data insight and competitive advantage when vying for research funding	create second, public version with generalised <i>Data Processing Description</i>

# Licensing research data

Horizon 2020 Open Access guidelines point to:

or

This DCC guide outlines the pros and cons of each approach and gives practical advice on how to implement your licence

## CREATIVE COMMONS LIMITATIONS

NC Non-Commercial

What counts as commercial?

ND No Derivatives

Severely restricts use

**These clauses are not open licenses**

# EUDAT licensing tool

Answer questions to determine which licence(s) are appropriate to use

Do you own copyright and similar rights in your dataset and all its constitutive parts?

Do you allow others to make commercial use of you data?

**Creative Commons Attribution (CC-BY)**

This is the standard creative commons license that gives others maximum freedom to do what they want with your work.

**Public Domain Dedication (CC Zero)**

CC Zero enables scientists, educators, artists and other creators and owners of copyright- or database-protected content to waive those interests in their works and thereby place them as completely as possible in the public domain, so that others may freely build upon, enhance and reuse the works for any purposes without restriction under copyright or database law.

<http://ufal.github.io/public-license-selector>

# Data sharing examples

The videos will be made available [via the bristol.ac.uk website](#) (both as streaming media and downloads) HD and SD versions will be provided to accommodate those with lower bandwidth. Videos will also be made available [via Vimeo](#), a platform that is already well used by research students at Bristol. [Appropriate metadata will also be provided](#) to the existing Vimeo standard.

All video will also be available [for download and re-editing by third parties](#). To facilitate this [Creative Commons](#) licenses will be assigned to each item. In order to ensure this usage is possible, the [required permissions will be gathered](#) from participants (using a suitable release form) before recording commences.

From [University of Bristol Kitchen Cosmology DMP](#)

We will make the data and associated documentation available to users under a [data-sharing agreement](#) that provides for: (1) a commitment to using the data [only for research purposes](#) and not to identify any individual participant; (2) a commitment to [securing the data](#) using appropriate computer technology; and (3) a commitment to [destroying or returning the data after analyses](#) are completed.

From [NIH data sharing statements](#)

# What to preserve & share

It's not possible to keep everything. Select based on:

- What has to be kept e.g. data underlying publications
- What can't be recreated e.g. environmental recordings
- What is potentially useful to others
- What has scientific, cultural or historical value
- What legally must be destroyed

How to select and appraise research data:

[www.dcc.ac.uk/resources/how-guides/appraise-select-research-data](http://www.dcc.ac.uk/resources/how-guides/appraise-select-research-data)

... fosters the **social** and **technical** links  
that enable Open Science in Europe and beyond

## Human Network

## Digital Network

**50 Partners from every EU country, and beyond**  
**Data centers, universities, libraries, repositories, legal experts**

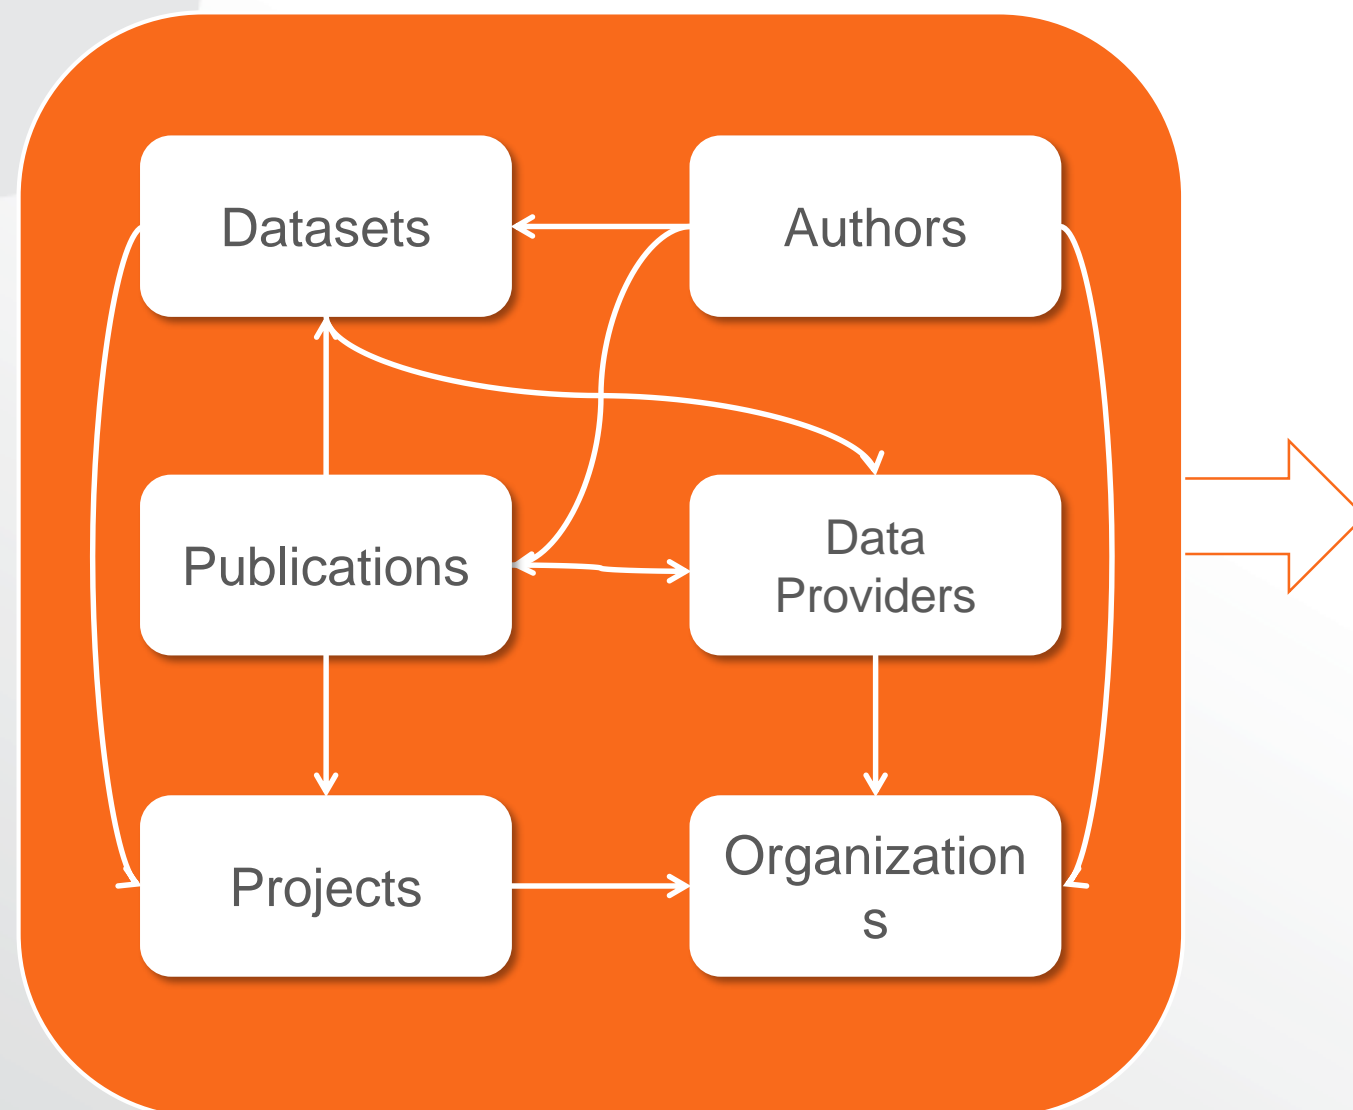

# Infrastructure for Open Knowledge

- **Foster and facilitate** the shift of scholarly communication towards making science Open and Reproducible
- **Collaborative and participatory** approach at European and Global level

# Integrated Scientific Information System

## Access to

- 17 mi **unique** publications
- 25 K datasets linked to publications
- 750 **validated** data providers
- 370K publications linked to **projects** from **7 funders**
- 3.5K links to software repositories

# World-wide alignment & synergies
